

INTRODUCING THE ONLY COMPLETE STACK OF DATA MIGRATION TOOLS THAT JUST WORK.

SQL Power Productivity Tools

SQL Power offers a complete suite of innovative productivity tools to simplify every aspect of Data Migration, Business Intelligence and Performance Measurement. We use these tools to automate, expedite and bullet-proof data migration efforts, build a strong decision support foundation and web-enable your BI environment.

SQL Power Tools help development teams expedite database design, ETL development, data cleansing and BI reporting efforts while considerably reducing the associated cost.

The SQL Power Advantage

Unlike typical solution providers who force you to invest in proprietary software, we bring proven productivity tools to the table at no additional cost. Our tools are easy to install, easy to learn, and easy to use - because we design them from the ground up to work intuitively.

PREMIUM BI PRODUCTIVITY TOOLS WITHOUT THE PREMIUM PRICE.

SQL Power Architect Data Modeling & Profiling Tool

The ideal tool for designing, profiling and reverse-engineering any Data Warehouse or database

SQL Power Architect's Data Profiling feature provides a simple yet powerful interface for exploring source and target databases. It allows you to instantly determine data information such as size of the data in each column, maximum & minimum values, frequency distribution of values in a column and more.

SQL Power DQguru Data Cleansing & MDM Tool

Cleanses your data, corrects addresses, removes duplicates to provides business users with complete and accurate data

SQL Power DQguru helps you easily identify, merge and remove duplicate data, and it builds cross-reference tables for Data Migration processes to link source and target tables. It ensures the overall integrity of your data, and can provide a single, 360-degree view of your customers, products or other data entity.

SQL Power Loader ETL (Extract/Transform/Load) Tool

Meta-data driven ETL tool that simplifies, automates, expedites and self-documents every aspect of data pre-processing, migration and cleansing

Used to create migration code, SQL Power Loader not only reduces the amount of custom coding required, but also improves the speed and quality of the work. Plus, SQL Power Loader can automatically generate ETL interfaces for data extraction, which significantly reduces development and troubleshooting time as well.

SQL Power Dashboard Executive Dashboard Tool

Web-based performance executive dashboard that helps decision-makers track Key Performance Indicators

After each data migration phase, source and target data can be reconciled using SQL Power Dashboard. This easy-to-use application instantly identifies discrepancies between the source and target, and highlights missing data in the target. Its drill-down capability makes it easy to find the root cause of any data issues that arise.

UNLEASH THE INTELLIGENCE WITHIN.
