

REAL-TIME BI METRICS, DELIVERED AT THE SPEED OF BUSINESS.

Introducing SQL Power's

Real-Time BI

A Real-Time Data Solution for
Reporting, Dashboards & Analysis

In today's fast-paced business world, companies are struggling to meet the demand for timely and accurate decision support data. Traditional Data Warehouse solutions are only updated nightly or weekly, and thus do not contain the latest information required for timely decision-making.

SQL Power's **Real-Time Business Intelligence** solution bundles **SQLstream's Real-Time data technology** with **SQL Power's Wabbit Enterprise reporting tool** to deliver **affordable, real-time performance metrics**.

Real-Time BI enables companies to make their decisions based on live (sub-second delayed) streaming data - ensuring the best-informed decisions based on the most recent information.

SQLstream is a real-time analytics processing and data integration engine that manages data from collection to delivery, including aggregation, validation, cleansing and transformation of data.

FEATURES

- **Real-Time** BI Reporting & Dashboards
- **Real-Time** OLAP "slice and dice" analysis
- **Real-Time** Data Integration
- **Quick to learn, easy to use** reporting environment

SQL POWER REAL-TIME BI ENABLES YOU TO:

- Report against Real-Time streamed data
- Visualize Real-Time streamed information in state-of-the-art dashboards
- Build a company-wide, low-cost Real-Time reporting environment
- Reduce the cost of Real-Time data integration
- Access your data warehouse around the clock without any downtime for data loads

When yesterday's data isn't good enough for today's decisions, you need Real-Time BI.
